

IRRADIANCE SENSOR SI-SERIES

Analogue interface 0...10 V, 4...20 mA

DESCRIPTION OF FUNCTIONS

The irradiance sensors of the Si-Series measure via a monocrystalline silicon solar cell the solar irradiance. To minimize influences of temperature to the measuring signal all of our irradiance sensors are using an active temperature compensation via a temperature sensor laminated to the back surface of the solar cell.

Additionally, to the solar irradiance measurement our Si-Sensors with the extension "-T" are able to measure the solar cell temperature. This solar cell temperature can approximately be used as module temperature.

The particular sensors are available with the connection cable 3 m, 15 m and 30 m.
