

UMD 96 – Measurement technology for panel mounting

Download data sheet

UMD 96

The UMD 96 is a powerful front panel meter* and replaces all analogue measuring devices. It measures 3-phase current and voltage in 4-quadrant operation in class 0.2 and thus the work in class 0.5s as well as all common mains quantities, e.g. harmonics up to the 50th harmonic. It can be measured via current transformers with N/5 A and N/1 A as well as via Rogowski coils (333 mV). It has an illuminated, large and easy-to-read digital display. It is conveniently operated via 4 function keys. A Pt100 sensor is integrated internally. It is used in 400 V-networks as well as in 690 V-networks.

Optionally, the UMD 96 can also be equipped with an Ethernet interface and a web server. This makes it easy to connect PLC systems and building management systems. Digital inputs/outputs and a serial RS485 interface with Modbus are available. The unit is parameterised and visualised with the ENVIS software.

* also suitable for DIN rail mounting with adapter

Insert

The device is used to measure consumption in LV and subdistribution systems.

Standard

INPUTS 3U, 3I	MEASUREMENT U, I, P, Q	PF, cos, THD	+/- Wh, varh	CURRENT INPUT X/5A	SUPPLY 230V
HARMONICS 50	SAMPLING 25,6 kHz	STANDARDS IEC 61557-12	STANDARDS class 0.5S IEC 62053-22	OUTPUTS 2x PULSE	INPUTS 1x DIGI

Optional

CURRENT INPUT X/100mA	CURRENT INPUT 333mV	SUPPLY 12V/24V/230V	M-BUS M-Bus		
ETH 	WEBSERVER 	OUTPUTS 2x RELAY	MODBUS 	RS485 	

Technical specification – UMD 96
