

Usage agreement

for the Connectivity Center annual license

Item to be used:

Item no.:	Description	Use/settings	Net price
426.023	Connectivity Center Annual license	Secure remote access to all network devices of the PV system via OpenVPN. Period of notice: 3 months Automatic extension: Annually	€50.00

Purpose of the Connectivity Center:

The purchased license can be installed on a device (a VPN HSPA mobile communications router EBW-H100, for instance). It facilitates the setup and application of secure remote access via OpenVPN to all remote network devices used in a remote network (IP cameras, measuring equipment, inverters, etc.) and does not depend on live access to blue'Log via VCOM / safer'Sun.

Certification management is automatically performed in the background.

Term:

The term of use shall be at least 12 months. The cost of the license shall be billed in advance for the entire 12-month term.

Termination:

Termination must be submitted to meteocontrol GmbH in writing three months before the 12-month term expires. If a termination is not submitted within this period, the term of this usage agreement shall be extended by an additional 12 months. The package price for an additional 12 months shall again be billed in advance. Terminated licenses shall be deactivated at the end of the term.

Please note that, under certain circumstances, functions facilitated by the Connectivity Center (for instance, when connecting two parts of a plant via VPN to enable joint plant control) may no longer be available after the agreement expires.

Delivery:

The license shall be installed on the appropriate device in the factory. Upon request, we shall provide you with a copy of the license file for storage and documentation purposes.
